

Motivation II

Organizational Behavior 06

March 18, 2026

Eun-Suk Lee
Chung-Ang University

Theories of Motivation

- Needs theories (Maslow, Alderfer, McClelland)
- Theory X and Theory Y
- Self-determination theory (& Herzberg's Two-Factor theory)
- Expectancy theory
- Goal-setting theory
- Regulatory focus theory
- Self-efficacy theory
- Equity theory
- Justice theory

Self-Determination Theory

(by Deci & Ryan)

- People prefer to feel they have control over their actions (“**autonomy**”) — anything that makes a previously-enjoyed task feel more like an obligation than a freely chosen activity will undermine motivation.
- Intrinsic vs. extrinsic motivation
 - Intrinsic motivation comes from within the individual, while extrinsic motivation comes from outside the individual.
 - Intrinsic motivation describes the undertaking of an activity for its inherent satisfaction, while extrinsic motivation describes behavior driven by external factors (to earn a reward or avoid punishment).

Self-Determination Theory

(by Deci & Ryan)

- Intrinsic vs. extrinsic motivation
 - Extrinsic rewards will reduce intrinsic interest in a task
 - When people are paid for work, it feels *less* like something they want to do and *more* like something they have to do (perceiving as a **control**).
 - This perception of being “controlled” is assumed to be de-motivational.

Richard Ryan & Edward Deci

Pay...?

- Herzberg's (1966) two-factor theory
 - **Motivators** (i.e., satisfiers)
 - give positive satisfaction, arising from intrinsic conditions of the job itself, such as recognition, achievement, or personal growth
 - **Hygiene Factors** (i.e., dissatisfiers)
 - do not give positive satisfaction, although dissatisfaction results from their absence. These are extrinsic to the work itself, and include aspects such as company policies, supervisory practices, or wages/salary

Traditional view

Satisfaction

Dissatisfaction

Herzberg's view

Motivators

Satisfaction

No satisfaction

Hygiene factors

No dissatisfaction

Dissatisfaction

Herzberg's view

The factors involved in producing job satisfaction (and motivation) are separate and distinct from the factors that lead to job dissatisfaction.

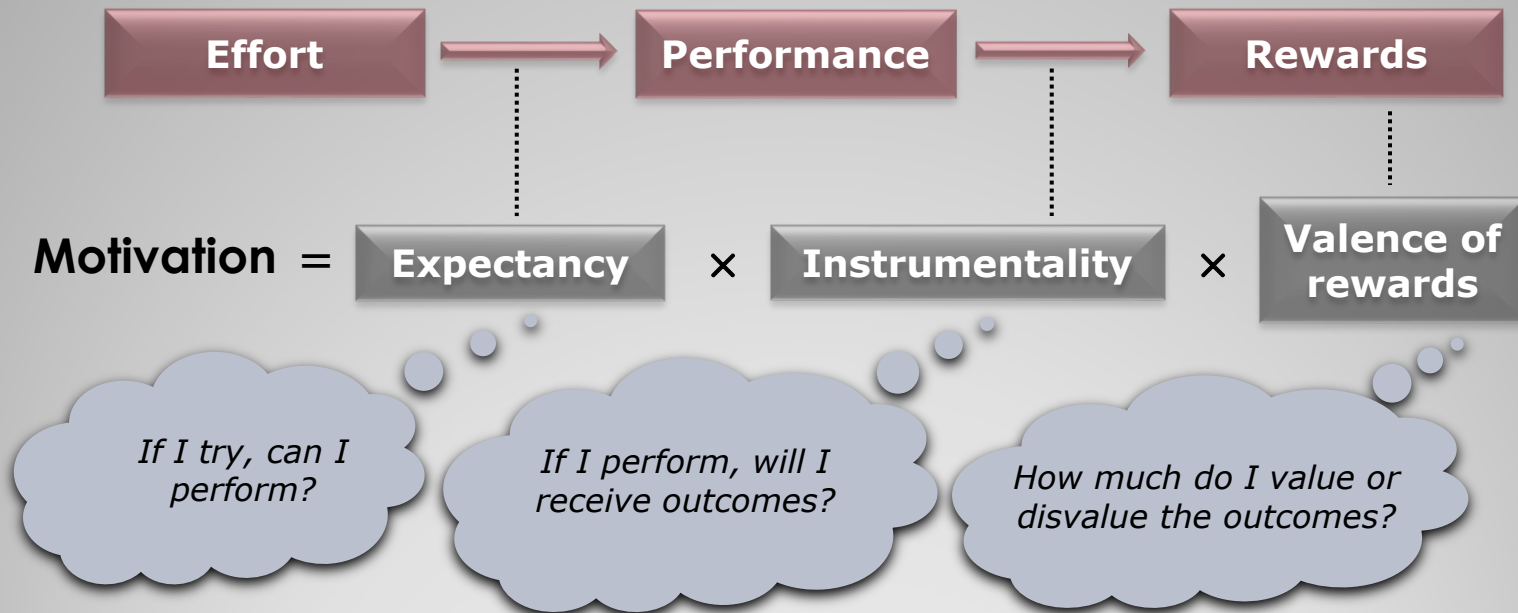

The opposite of job satisfaction is not job dissatisfaction but, rather, *no* job satisfaction; and similarly, the opposite of job dissatisfaction is not job satisfaction, but *no* job dissatisfaction.

Pay...?

- Fang & Gerhart (2012); Kim, Gerhart, & Fang (2022)
 - The relationship between financial incentive and performance: (+)
 - There are not only “controlling” aspects of extrinsic rewards, but also “informational” aspects of extrinsic rewards!
 - Pay can be a “motivator” for better performance. (beyond a hygiene factor)
 - When pay is perceived as recognition for good competence and performance
- Deci, Olafsen, & Ryan (2017)
 - Pay promotes the quantity of performance largely for simple, algorithmic tasks, but does not enhance high-quality performance.

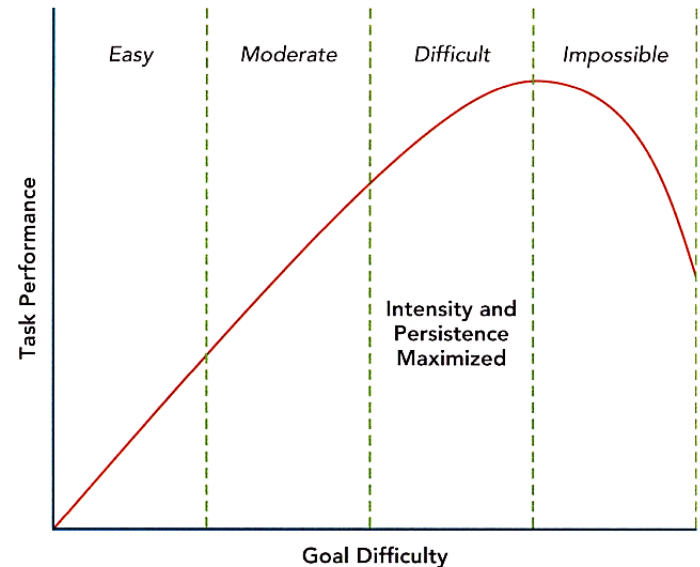

Vroom's Expectancy Theory

Expectancy theory: Individuals are motivated to the extent to which they expect that effort will lead to successful performance, that successful performance will be rewarded, and that they value the rewards received.

Goal-Setting Theory

- Goal-setting theory argues that specific and difficult goals, with feedback, lead to higher performance
 - Specific difficult goals consistently lead to better performance than specific easy goals, general goals such as “do your best,” or no goals
 - Goal is most effective when there is feedback showing progress toward the goal
- S.M.A.R.T. goal setting:
 - **Specific**: *What will be accomplished? What actions will you take?*
 - **Measurable**: *What data will measure the goal? (How much? How well?)*
 - **Achievable**: *Is the goal doable?*
 - **Relevant**: *How does the goal align with broader goals? Why is the result important?*
 - **Time-bound**: *What is the time frame for accomplishing the goal?*

Regulatory Focus Theory

- Higgins (1997)
 - People have two distinctive orientations of self-regulation in pursuing their goals, thus exhibiting different cognitive and behavioral patterns in approaching gains and avoiding pains.
- People who self-regulate primarily with a **promotion focus** tend to...
 - Strive for achievements/growth and approach conditions that move them closer toward desired goals (approaching gains; maximizing success)
 - Be sensitive to the presence/absence of positive outcomes
- People who self-regulate primarily with a **prevention focus** tend to...
 - Strive to fulfill duties/obligations and avoid conditions that pull them away from desired goals (avoiding pains; minimizing failure)
 - Be sensitive to the presence/absence of negative outcomes
- Managers aware of employees' regulatory focus may motivate them by appropriately stimulating their promotion- or prevention-orientation.

An Interesting Experiment by MIT Undergrads

Squirt your hands!

By **NOT** squirting:

- You increase your risk of contracting **swine flu**
- 99.99% of the germs on your hands remain untouched

Squirt your hands!

By squirting:

- You decrease your risk of contracting **swine flu**
- You kill 99.99% of the germs on your hands

Squirt your hands!

By **NOT** squirting:

- You increase your risk of getting sick
- 99.99% of the germs on your hands remain untouched

Squirt your hands!

By squirting:

- You decrease your risk of getting sick
- You kill 99.99% of the germs on your hands

Regulatory Focus Theory

- Lanaj et al. (2012): Meta-analysis

Performance	Regulatory focus	<i>k</i>	<i>N</i>	Meta-analytic correlation
Task performance	Promotion focus	22	3,876	.28
	Prevention focus	21	3,772	.01
Organizational citizenship behavior	Promotion focus	17	2,762	.30
	Prevention focus	17	2,762	-.04
Safety performance	Promotion focus	6	1,280	-.15
	Prevention focus	6	1,280	.51
Innovative performance	Promotion focus	7	1,393	.28
	Prevention focus	7	1,393	.04

k = number of studies used in meta-analysis; *N* = total sample size

Self-Efficacy Theory

- Self-efficacy
 - The belief that a person has the capabilities needed to execute the behaviors required for task success. A kind of self-confidence or a task-specific version of self-esteem.
- Goal setting and self-efficacy

Self-Efficacy Theory

- Bandura (1977): Four ways to increase self-efficacy
 1. Prior performance experience: If one has performed well at a task previously, he or she is more likely to feel competent and perform well at a similarly associated task
 2. Vicarious modeling: One can develop self-efficacy if he or she sees someone else doing the task; most effective when you see yourself as similar to the person you are observing
 3. Verbal persuasion: One can develop self-efficacy as someone convinces that he or she has the skills necessary to be successful; motivational speakers use this tactic
 4. Emotional arousal: Arousal leads to an energized state, so we get “psyched up,” feel up to the task, and perform better

Equity Theory (by Adams)

- Individuals compare their job inputs and outcomes with those of others, and then respond to eliminate any inequities.

$$\frac{\text{Outcomes (Self)}}{\text{Inputs (Self)}} <, >, \text{ or } = \frac{\text{Outcomes (Other)}}{\text{Inputs (Other)}}$$

Ratio Comparisons*

Perception

$$\frac{O_A}{I_A} < \frac{O_B}{I_B}$$

Inequity due to being underrewarded

$$\frac{O_A}{I_A} = \frac{O_B}{I_B}$$

Equity

$$\frac{O_A}{I_A} > \frac{O_B}{I_B}$$

Inequity due to being overrewarded

*Where $\frac{O_A}{I_A}$ represents the employee; and $\frac{O_B}{I_B}$ represents relevant others

Equity Theory

$$\frac{\text{Outcomes (Self)}}{\text{Inputs (Self)}} <, >, \text{ or } = \frac{\text{Outcomes (Other)}}{\text{Inputs (Other)}}$$

- Choices for dealing with inequity
 - Change inputs (exert less effort if underpaid, exert more effort if overpaid – but not much likely)
 - Change outcomes
 - e.g., (when underpaid) Individuals paid on a piece-rate basis can increase their pay by producing a higher quantity of units of lower quality
 - Distort/change perceptions of self
 - e.g., (when overpaid) “I used to think I worked at a moderate pace, but now I realize that I work a lot harder than everyone else.”
 - Distort/change perceptions of others
 - e.g., (when underpaid) “John’s job is not as desirable as I previously thought it was.”
 - Choose a different referent person
 - Leave the field (quit the job)

Justice Theory

Distributive Justice

- The judgment that people make with respect to the outcomes received relative to the outcomes received by other people with whom they identify (referent others)

Procedural Justice

- A concept of justice focusing on the methods used to determine the outcomes received

Interactional Justice*

- A concept of justice referring to the interpersonal nature (the perceived degree to which one is treated with dignity and respect)

Colquitt et al. (2001; meta-analysis):
All the types of justice lead to higher levels of job performance and OCB.

Organizational Justice

- Overall perception of what is fair in the workplace

***Explanation:** Emphasize aspects of procedural fairness that justify the decision.

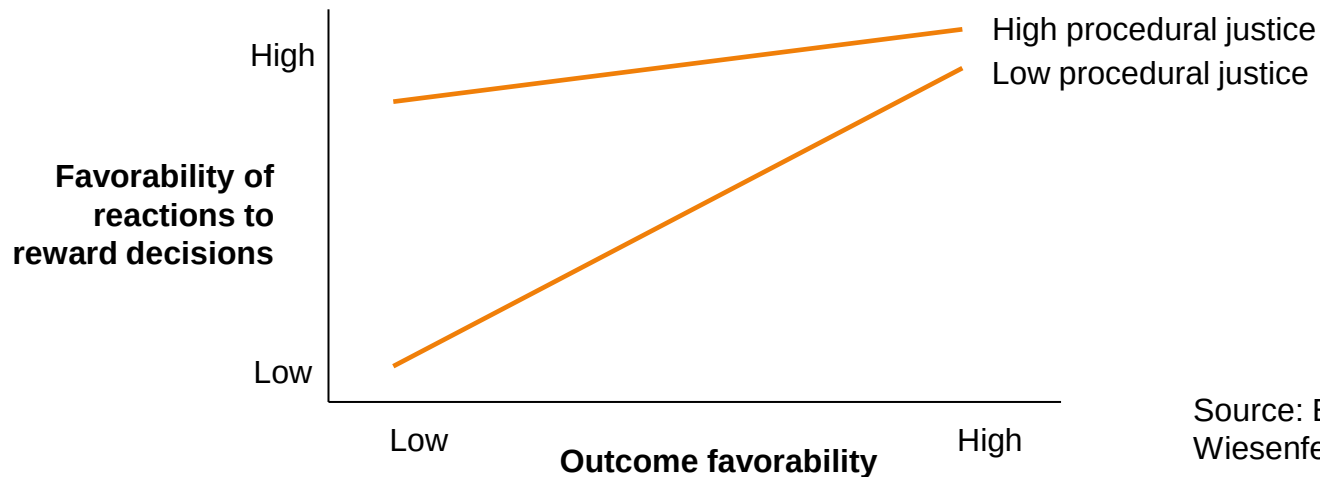

***Social sensitivity:** Treat the person with dignity and respect.

***Consideration:** Listen to the person's concerns.

***Empathy:** Identify with the person's feelings.

Justice Theory

- Interaction between distributive and procedural justice
 - If outcomes are favorable and individuals get what they want, they care less about the process; procedural justice doesn't matter much when distributions are perceived to be fair.
 - When outcomes are unfavorable, if the process is judged to be fair, then employees are more accepting of unfavorable outcomes.

Source: Brockner & Wiesenfeld (1996)

Next Week (1)

- Topic: Personality
- Assignment
 - Please complete the “**Big 5**” survey
 - You can find the survey on e-class (“Big 5_excel_한글” file)
 - Submit your “Big 5” survey result in “과제” menu on e-class by **March 20 (Friday, 11:59 pm)**

Next Week (2): Team Exercise

- What you must do before this team exercise
 1. Complete “Leadership Style” survey (find this on e-class)
 2. Submit the **last two pages** of your survey in “과제” menu on e-class by **March 20 (Friday, 11:59 pm)**
 - ✓ .pdf, .jpg, .docx... any file type is OK.
 - ✓ pdf editing: <https://www.ilovepdf.com/>
 3. Read “Goleman (2000). *Leadership That Gets Results*” (find this article on e-class)
 4. Think about your own leadership experiences (so that you can actively discuss with your teammates in class)

Next Week (2): Team Exercise

- Each member shares the strengths and weaknesses identified in leadership assessments
- Each member shares the problems you have often experienced in leading others that you haven't solved individually
- All other team members actively listen to each member's sharing and assist the member to solve the problems & identify situations under which each member's leadership style may be effective or ineffective
- In your team memo, describe (a) problems/situations identified in your team and (b) team's suggestions/recommendations in terms of leadership styles
